MEDICAL AESTHETICS

Going Beyond Beauty

At Dr. Christine Rodgers Medical Aesthetics, our services aren't just designed to make you look younger. They've been created to help you feel completely comfortable in your own skin—from the inside, out. To achieve this goal, we believe in a customized approach using a combination of our expert services and innovative, home-use products.

We pride our business on offering the best quality skincare treatments personally selected by Dr. Rodgers herself. They are proven to be safe on skin and effective in reducing the signs of aging. Wrinkles, dull skin, pigmentation, sun damage, acne and volume loss don't stand a chance against our dedicated team of skincare specialists. And now it's your turn to meet the new you.

Botox

Botox is a non-surgical, aesthetic treatment for moderate to severe wrinkles. It reduces the contractions of the muscles that cause those stubborn frown lines that develop over time. One 10-minute treatment of just a few tiny injections will create a noticeable improvement in fine lines and wrinkles. Results can last 3–4 months.

Dermal Fillers

Dermal fillers are used to reduce or eliminate wrinkles, raise scar depressions, enhance lips and replace soft-tissue volume loss. We offer a wide variety of dermal fillers including Juvederm, Restylane and Radiesse. Based on your specific needs, one of our skincare specialists can help you decide which filler will render the best results.

Fat Transfers

Fat transfers are a safe and highly effective method for adding youthful volume the face, lips and cheeks. Natural fat is taken from the abdomen, hips, buttocks or thighs and then carefully re-implanted where desired. The result is instant plumping without any foreign materials or implants.

Skin Rejuvenation

As we age, the effects of sun damage and environmental pollutants take their toll on our skin, leading to wrinkles, sunspots and a dull, tired appearance. Laser resurfacing can help reverse these unfortunate results and restore a healthy, younger complexion. At Dr. Christine Rodgers Medical Aesthetics, we use only Sciton brand lasers because these more advanced resurfacing technologies have shown to be less damaging compared to Fraxel or CO2 lasers.

There are two approaches to resurfacing: full-field and fractional. Full-field resurfacing, also called MicroLaserPeel[®], uses a specialized laser to precisely remove a layer of skin across the entire treatment area. The body will naturally replace what was removed with a fresh, healthy layer of skin. Treatments range from shallow (eliminating fine lines, sun spots and tired-looking skin) to deep (improving and eliminating deep wrinkles, including persistent upper lip lines and crow's feet).

ProFractional Therapy[™] (fractional resurfacing) on the other hand, removes pinpoint columns of skin, leaving the surrounding tissue intact. This approach lets the laser penetrate deeply for effective collagen remodeling while the surrounding intact tissue promotes rapid healing.

SkinTyte™

The SkinTyte treatment uses pulsed infrared light energy to deeply heat dermal collagen. This process initiates the body's natural healing process to renew skin and create a firmer, more youthful-looking appearance. SkinTyte is an in-office procedure and requires no downtime. A series of 2–3 treatments set one month apart is typically recommended for maximum results.

Intense Pulsed Light

Intense Pulse Light treatments can produce remarkable improvement in the skin with minimal risk. In fact, a Stanford University study published in the *Journal of Investigative Dermatology* suggests that IPL can promote anti-aging benefits at a molecular level, clinically altering cells to have more youthful genetic traits.

IPL works to even skin tone and improve both brown and red conditions such as sunspots, flushing, Rosacea and birth marks. The treatment smooths the texture of skin while minimizing pore size and has proven particularly effective in the jowl, forehead and cheek areas. It is also highly useful in the removal of unwanted hair.

Laser Hair Removal

Laser hair removal is an excellent option for getting rid of unwanted or unsightly hair. It provides a more permanent solution than time-consuming razors or painful, irritating waxes. This technique is effective in removing dark, course hair from any body region and typically requires multiple treatments for lasting results.

Sclerotherapy

Sclerotherapy the treatment of fine leg veins (also called spider veins) with an injectable solution. Best results may require multiple treatments.

Chemical Peels

Chemical peels are designed to exfoliate the skin and deliver a fresher complexion at a more rapid pace than traditional skin care. We offer several different levels of chemical peels that are specially selected for you by our skincare specialists. Results may include an improvement in the appearance of fine lines, healthy skin cell growth, increased clarity and texture, decreased acne and sun damage and a smoother overall complexion. Treatments range from the mildest "lunch time" peel to the more aggressive salicylic peels for acne.

Microdermabrasion

Traditional microdermabrasion utilizes fine crystals to remove the most superficial layers of the skin and create a brighter, more vibrant complexion. The DiamondTome™ Skin Resurfacing System is one form of microdermabrasion that polishes the skin with diamond chips and then uses a vacuum instrument to cleanse the surface and reveal a smoother, more supple top layer of skin.

There is evidence to suggest that the microdermabrasion process promotes the synthesis of collagen and elastin in the dermis, resulting in healthier skin.

Facials

Our custom facials do everything from treat acne and aging to alleviate and improve stressed, dry or dull skin. Gentle extractions help clear clogged pores while a collection of soothing products and facial massage restore skin health and create a fresh, healthy glow. It's the perfect way to relax your skin worries away.
